Problem Statement

Write a Java program to accept a password. If the password contains fewer than 8 characters, throw a user-defined exception named WeakPasswordException.

Sample Input

java123

Sample Output

Exception: Password must contain at least 8 characters.

Your Code

```
1 import java.util.Scanner;
2
3 public class Main {
4     static void validatePassword(String password) {
5         if (password.length() < 8) {
6             throw new WeakPasswordException();
7         }
8     }
9
10    public static void main(String[] args) {
11        Scanner sc = new Scanner(System.in);
12        String password = sc.nextLine();
13    }
```

```
14         try {
15             validatePassword(password);
16             System.out.println("Password is valid");
17         } catch (WeakPasswordException e) {
18             System.out.println("Exception: " + e.getMessage());
19         }
20     }
21 }
22
23 class WeakPasswordException extends Exception {
24     public WeakPasswordException(String message) {
25         super(message);
26     }
27 }
```

Input

java123

Output

Exception: Password must contain at least 8 characters.
