5/5 answered

Q4 Email Validation

10 marks

Problem Statement

Write a Java program to accept an email address. If the email does not contain the '@' symbol, throw a user-defined exception named InvalidEmailException.

Sample Input

student.gmail.com

Sample Output

Exception: Invalid email address.

Your Code

```
1 public class Main {  
2     public static void main(String[] args)  
3     {  
4         java.util.Scanner scanner = new java.util.Scanner(System.in);  
5         String email = scanner.nextLine();  
6  
7         try {  
8             validateEmail(email);  
9         } catch (InvalidEmailException e)  
10        {  
11            System.out.println("Exception: Invalid email address.");  
12        }  
13    }  
14  
15    public static void validateEmail(String email)  
16    {  
17        if (!email.contains("@")) {  
18            throw new InvalidEmailException("Invalid email address.");  
19        }  
20    }  
21 }
```

```
17     }  
18 }  
19  
20 class InvalidEmailException extends Except  
21     public InvalidEmailException(String me  
22         super(message);  
23     }  
24 }
```

Input

student@gmail.com

Output

Exception: Invalid email address.
