Q1. Food Delivery Billing System (Multiple Inheritance using Two Interfaces)

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.*;
interface DeliveryCharge{
    double calculateDeliveryCharge(double cost);
}
interface CouponDiscount{
    double calculateDiscount(double cost,String coupon);
}
class FoodOrder implements DeliveryCharge,CouponDiscount{
    public double calculateDeliveryCharge(double cost){
        return (cost>=500)?0:50;
    }
    public double calculateDiscount(double cost,String coupon){
        return coupon.equals("SAVE10"?cost*0.10:0;

    }
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);
        double cost=sc.nextDouble();
        sc.nextLine();
        String coupon=sc.nextLine();
        FoodOrder f=new FoodOrder();
        double delivery=f.calculateDeliveryCharge(cost);
        double discount=f.calculateDiscount(cost,coupon);
        double bill=cost+delivery-discount;
        System.out.println("Food Cost : "+cost);
        System.out.println("Delivery Charge : "+delivery);
        System.out.println("Discount : "+discount);
        System.out.println("Final Bill : "+bill);
    }
}
```

INPUT

600
SAVE10

OUTPUT

Food Cost : 600.0
Delivery Charge : 0.0
Discount : 60.0
Final Bill : 540.0

Q2. Hotel Billing System (Multiple Inheritance using One Class and One Interface)

Score: 0.00 TC: 0/3 passed

CODE

```
import java.util.*;
public class Main{
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);
        int roomNo=sc.nextInt();
        sc.nextLine();
        String guestName=sc.nextLine();
        double roomRent=sc.nextDouble();
        HotelBill h=new HotelBill(roomNo,guestName,roomRent);
        h.display();

    }
}
class Room{
    int roomNo;
    String guestName;
    double roomRent;
    Room(int roomNo,String guestName,double roomRent){
        this.roomNo=roomNo;
        this.guestName=guestName;
        this.roomRent=roomRent;

    }
}
interface ServiceCharge{
    double calculateServiceCharge();
}
class HotelBill extends Room implements ServiceCharge{
    HotelBill(int roomNo,String guestName,double roomRent){
        super(roomNo,guestName,roomRent);
    }
    public double calculateServiceCharge(){
        return (roomRent>=5000)? roomRent*0.12:roomRent*0.08;
    }
    void display(){
        double service=calculateServiceCharge();
        double bill=roomRent+service;
        System.out.println("Room Number : "+roomNo);
        System.out.println("Guest Name : "+guestName);
        System.out.println("Room Rent : "+roomRent);
        System.out.println("Service Charge :"+service);
        System.out.println("Final Bill :"+bill);

    }
}
```

INPUT

205
Ananya
6000

OUTPUT

Room Number : 205
Guest Name : Ananya
Room Rent : 6000.0
Service Charge :720.0
Final Bill :6720.0
